(54) Title: PROVIDING INFORMATION FOR MOBILE USERS

(57) Abstract: The invention relates to a method and system for delivering the archived personal content of mobile users and/or material selected on the basis of said archived personal content. At least one remote data repository is connected to the telecommunications system, storing therein information including personal content including data objects and/or information extracted from said objects. At least one of the repositories is assigned for each mobile terminal. Further, external data is stored somewhere in the network. Items of data are retrieved from said remote data repository, the items including an object and/or information extracted from an object. Then at least one predetermined criterion is read, the criterion defining a relationship between the retrieved data and the external data. If said relationship fulfills a predetermined condition, data to be delivered to the mobile terminal is selected and then delivered to the mobile terminal.
